

Model icebreaker ODEN October 2015

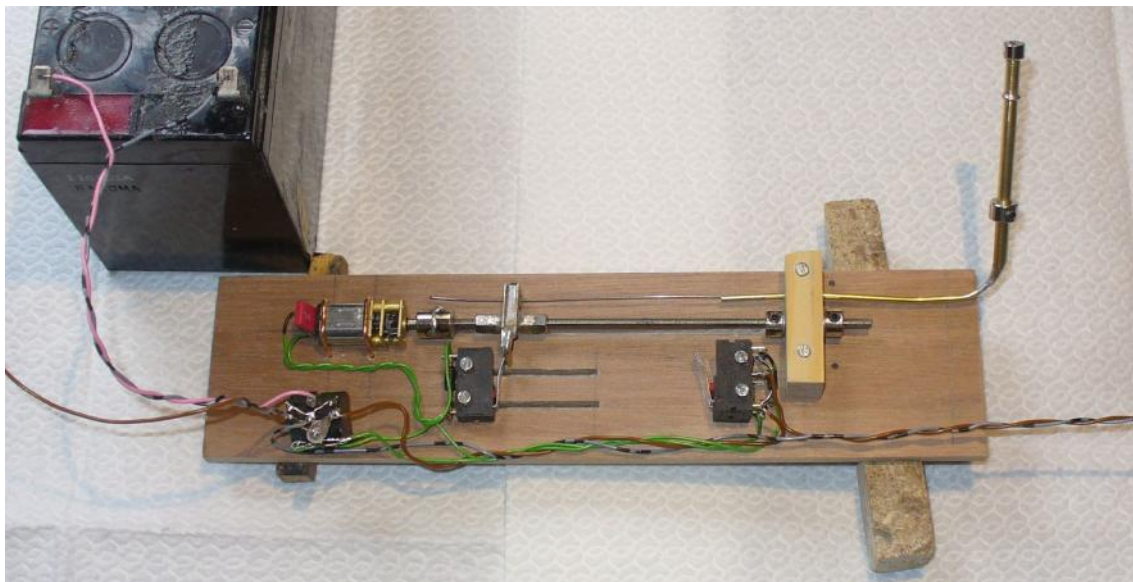

What's new since March 2015?

Not much ☹️

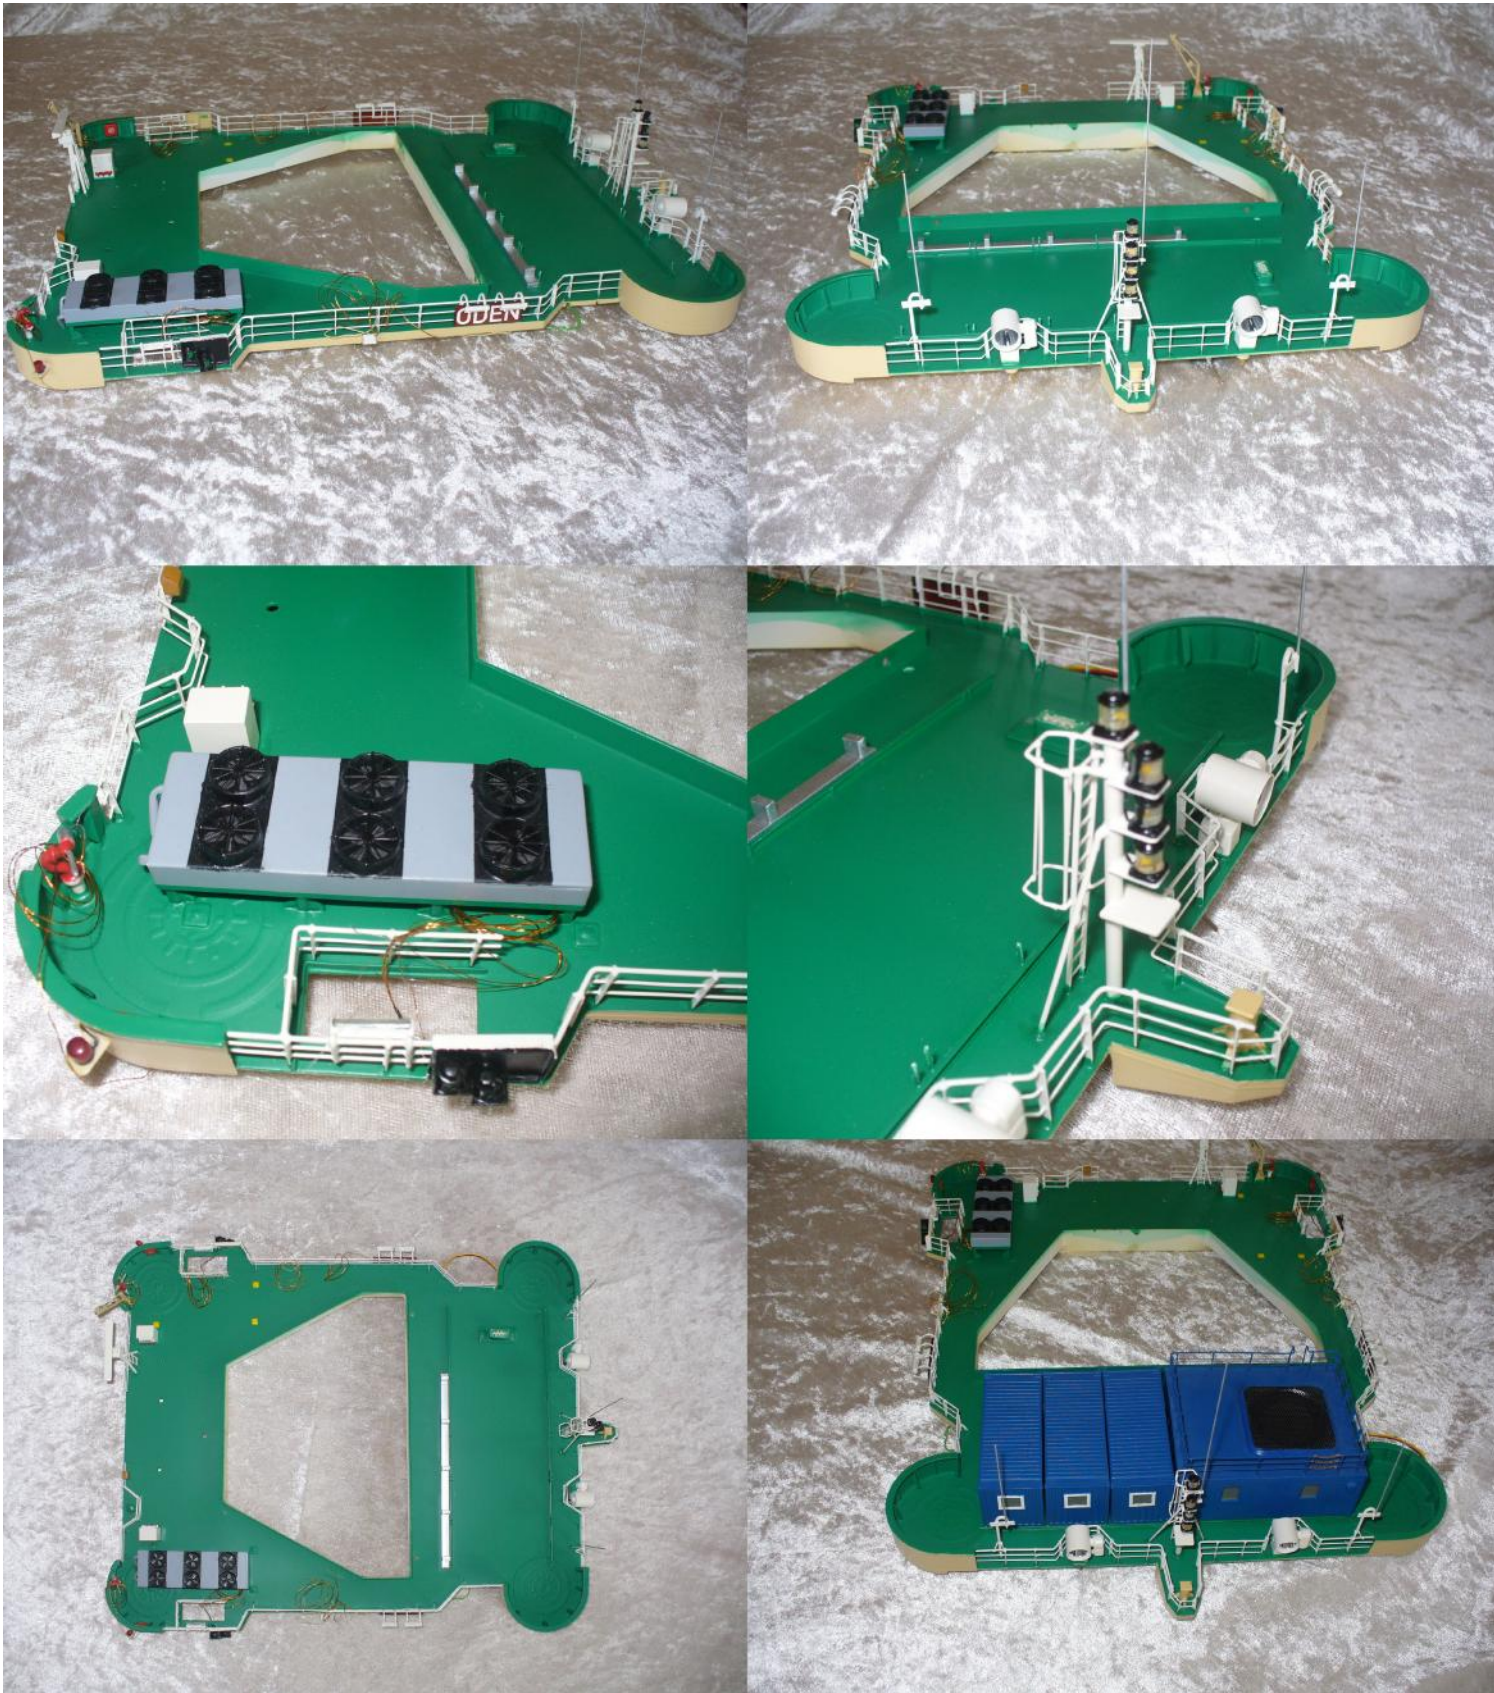

The aftdeck railing and the A-frame are soldered together.

The aft anchorlight up-and-down-mechanic is ready.

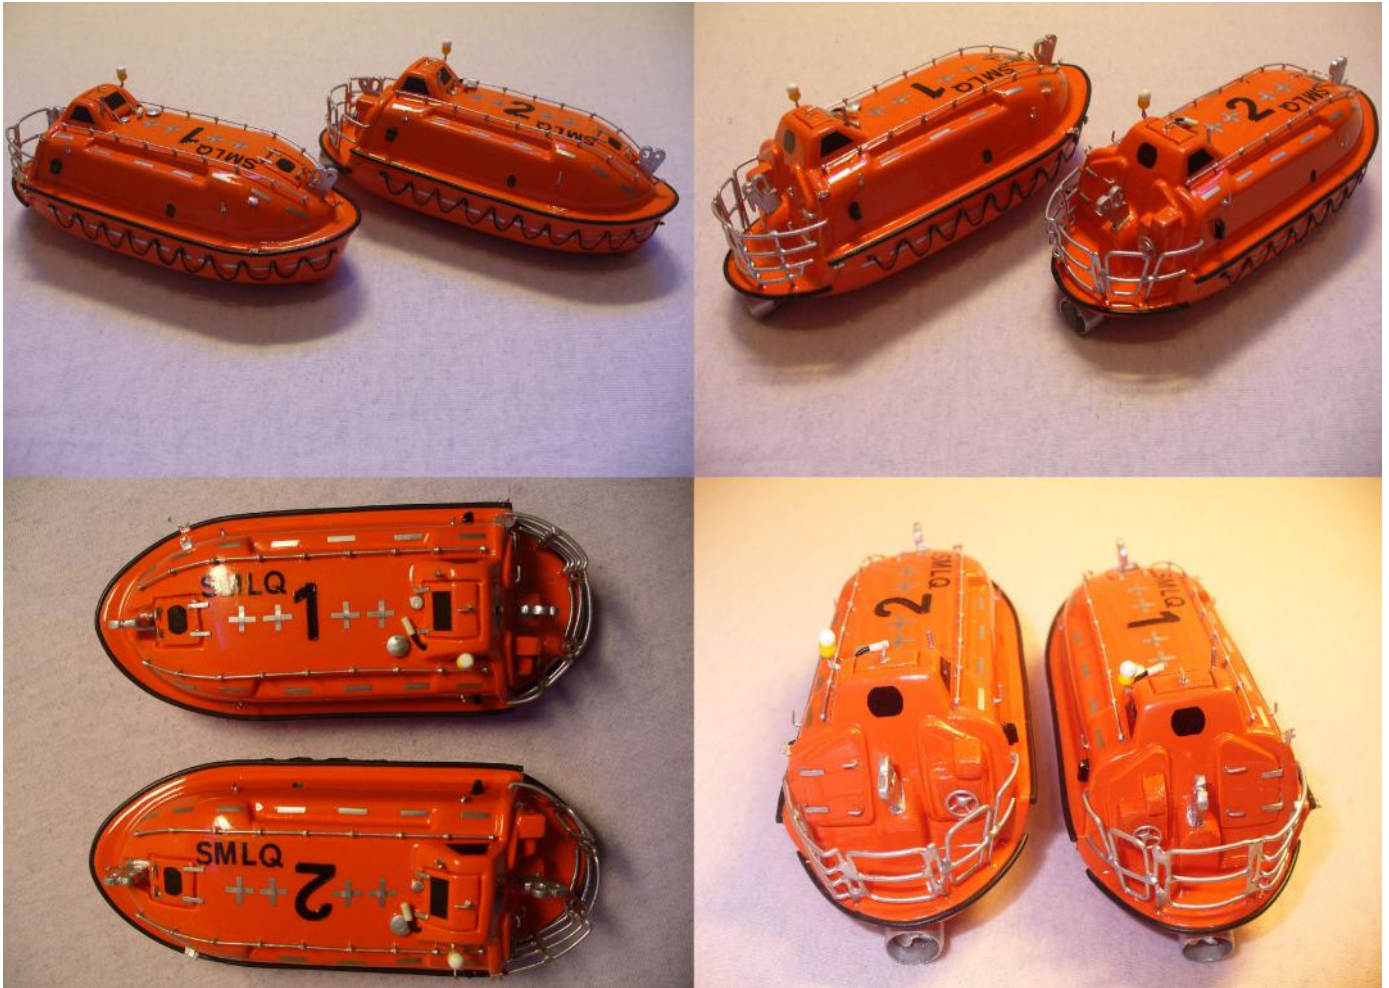

In May, I brushed the Deck Nr 4. After brushing the deck was completed with all the little details.

All the little lamps are wired. Each spotlight is powered by a 1-Watt LED with a 7° beam.

A few days ago, the both lifeboats are completed.

In the moment I'm building up the Davits.

As I said, not much.

Best regards

Peter
